

Table of Contents

Short Textbook on Solar Physics and Terrestrial Effects, by Roger P. Briggs

Chapter 1 —How the Sun Came to Be: Stellar Evolution	1
Section 1.—The Protostar	1
Section 2.—The Hydrogen Burning Stage	1
Section 3.—Becoming a Red Giant	2
Section 4.—Dwarfs, Neutron Stars, Supernovas, and Black Holes	3
Problems and Questions	5
Chapter 2 —The Structure of the Sun	7
Section 1.—The Interior	7
Section 2.—Thermonuclear Fusion	7
Section 3.—The Surface Atmospheres	9
Section 4.—The Inner Corona	13
Section 5.—The Outer Corona	14
Problems and Questions	15
Chapter 3 —Studying the Sun	17
Section 1.—White Light: The Photosphere	17
Section 2.—Sunspots	17
Section 3.—Hydrogen-Alpha: The Low Chromosphere	21
Section 4.—Ultraviolet: The High Chromosphere	23
Section 5.—X-rays: The Solar Corona	25
Section 6.—Radio Emission: Solar Flares	27
Problems and Questions	28
Chapter 4 —Solar-Terrestrial Interactions	29
Section 1.—The Terrestrial Space Environment	29
Section 2.—Terrestrial Effects	32
Section 3.—Forecasting and the Future of Solar Physics	35
Problems and Questions	38
Answers to Chapter Questions	
Chapter 1	39
Chapter 2	40
Chapter 3	42
Chapter 4	43
Index of Text	45

Hands-on Activities for the Classroom, by Robert J. Carlisle

Activity 1. —Building a Spectroscope	47
Activity 2. —Energy Transport in the Sun	53
Activity 3. —Measuring the Solar Constant	59
Activity 4. —Luminosity of the Sun and Stars	65
Activity 5. —Seeing at Different Wavelengths	71
Activity 6. —The Earth–Sun Orientation	75
Activity 7. —The Effect of the Solar Wind on the Geomagnetic Field	79
Activity 8. —Determining the Rotation Period of the Sun	83
Activity 9. —Radiation Hazards in Space	87
Resources	97
References	99
List of Materials	103
